Forest Health Program in New Jersey

- ★ Trenton
- Regional Offices

- Emerald ash borer
- Beech bark disease
- Hemlock woolly adelgid
- Southern pine beetle
- Gypsy moth
- Thousand cankers disease
- Spotted lanternfly
- Sirex woodwasp
- Asian longhorned beetle
- Winter moth
- Asian gypsy moth
- Oak wilt

Emerald ash borer in NJ

Detected in four municipalities

- Infested trees in Somerset County
- Purple panel trap in Burlington and Mercer Counties

Ash Trees in New Jersey and Emerald Ash Borer Detections

Somerset County

Bridgewater Township
Hillsborough Township

Mercer County

Ewing Township

Burlington County

Westampton Township

Sources: USDA-FS FIA, National Atlas of the USA.
Processing note: This map was produced by linking plot data to MODIS satellite pixels (250 m) using gradient nearest neighbor techniques.

Disclaimer: Information displayed on this map was derived from multiple sources. FIA maps are only for graphic display to meet general reporting purposes. Inquires concerning information displayed on FIA maps, their sources and intended uses should be directed to:

USDA Forest Service
Northern Research Station
1992 Folwell Ave., St. Paul, MN

Ash Basal Area
(ft²/acre)

Dark Blue	Greater than 20
Light Blue	5 - 20
Light Green	Less than 5

Please note:
this map shows forested ash, it does not represent ash trees on streets or planted in parks or yards.

Emerald Ash Borer (*Agrilus planipennis*)

- Develop an EAB Task Force
- Establish 3 detection/trap trees girdled May 2014, peeled January 2015
- Over 400 purple panel traps deployed in 2014
- Write a statewide EAB Response Plan
- Continue monitoring and outreach
- Delimiting Survey
 - Create NJ specific brochures and handouts

Emerald Ash Borer (*Agrilus planipennis*)

Crown dieback

Woodpecker damage

Emerald Ash Borer (*Agrilus planipennis*)

S-shaped gallery under the bark

S-shaped galleries under bark crack

Emerald Ash Borer (*Agrilus planipennis*)

Here are the facts:

- EAB will kill 99% of ash trees
- NJ has over 24 million ash trees
- Spreading costs over multiple years is easier to manage than paying all at once
- Areas within 10-15 miles of a known EAB find are at high risk for EAB infestation
- White fringetree is a host to EAB

Emerald Ash Borer (*Agrilus planipennis*)

Management Options

Under SLAM (SLOW Ash Mortality), suppression activities are combined and integrated. Such activities may include:

- Systemic insecticides
- Removal of infested ash trees before EAB adults emerge;
- Use of trap trees (girdle then cut down);
- Harvesting/thinning ash trees to reduce ash phloem (EAB food)

Emerald Ash Borer (*Agrilus planipennis*)

Management Options

EAB Response Plan

- Inventory
- Prioritize removal of already declining/dead ash trees
- Select high value ash trees to save using chemical treatments
- Budget
- Wood utilization/disposal
- Restoration

**Emerald Ash Borer

Beech Bark Disease

Cryptococcus fagisuga Lind. (scale),
Nectria coccinea var. *faginata* (fungus)

Host: American Beech
Found: Northern NJ
Origin: Europe

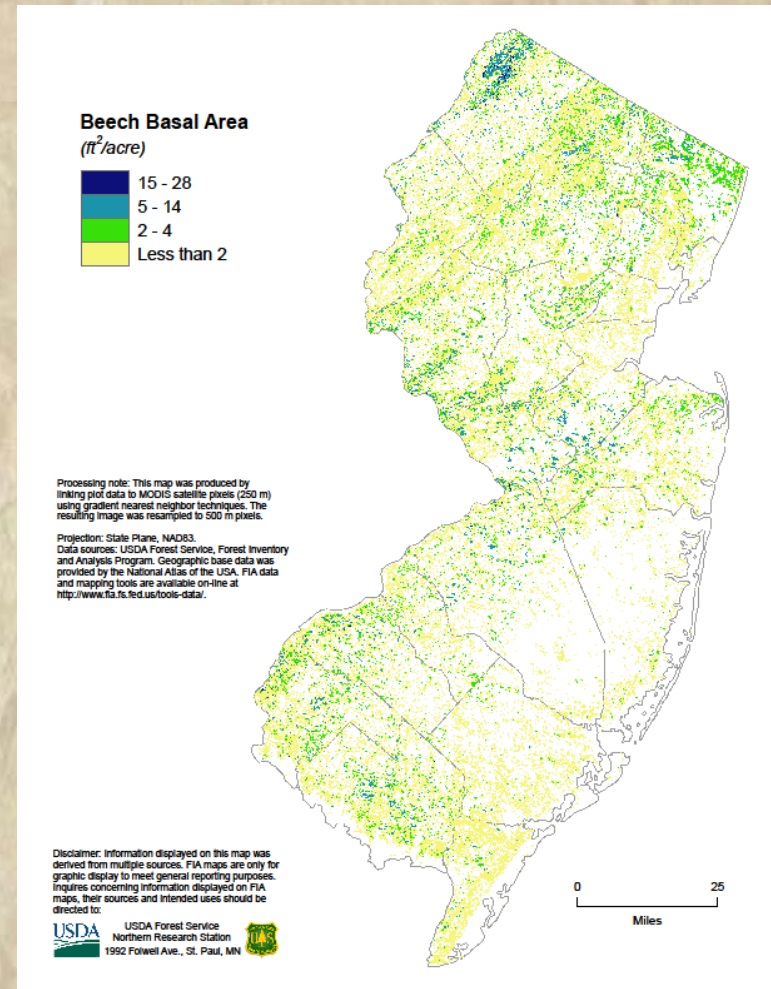

Beech Bark Disease

Cryptococcus fagisuga Lind. (scale),
Nectria coccinea var. *faginata* (fungus)

- American beech provides value:
 - Wildlife
 - Landscape
 - Timber
- Populations concentrated in northern and western NJ
- NJ has over 2.8 million beech trees
- Currently no effective treatments against BBD
- BBD resistant beech seed orchard in West Virginia

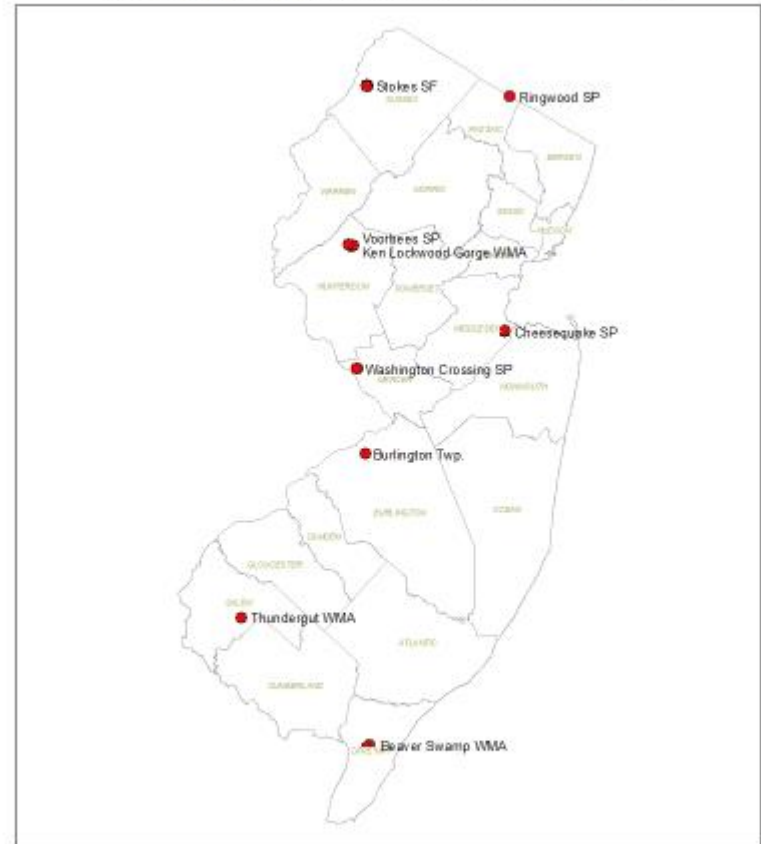

Beech Bark Disease

Cryptococcus fagisuga Lind. (scale),
Nectria coccinea var. *faginata* (fungus)

- Establish 9 permanent plots
–4 North, 3 Central, 2 South
- Continue investigation of resistant American beech
- Delineate BBD range and resistance in NJ
- Most southerly BBD find was in Hunterdon County

Hemlock Woolly Adelgid (HWA)

(Adelges tsugae Annand)

Host: Eastern and
Carolina Hemlock
Found: Statewide
Origin: Asia

Hemlock Woolly Adelgid (HWA)

(*Adelges tsugae* Annand)

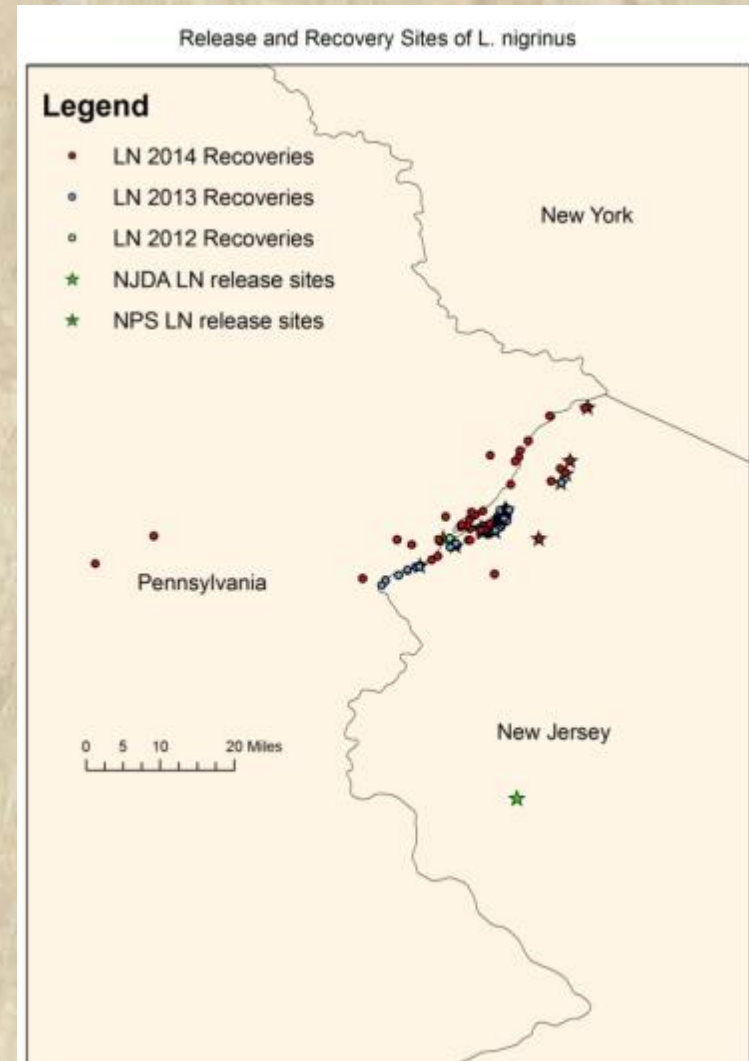

- 2014 chemical treatment on State lands
- Signs of “resistant” trees in NW NJ

Biotic Control:

- *Laricobius nigrinus* released
- Successful in NW NJ

Photos courtesy of insectimages.org

2014 HWA Treatment Summary

Parcel Name	# Trees	Treatment Type
Kittatinny	22	Soil Injection
Princeton	13	Soil Injection
Ringwood	8	Soil Injection
Ringwood	4	Tables
Stokes	42	Tablets
Stokes	76	Trunk Injection
Swartswood	45	Soil Injection
Washington Crossing	27	Soil Injection
Wawayanda	0	----
Total	237	

Hemlock Woolly Adelgid Treatment

(*Adelges tsugae* Annand)

- Soil Injection (1-two Root Injector)
- Bark spray
- Soil drench
- Trunk injection
- CoreTect tablets

imidacloprid and dinotefuron products

Hemlock Woolly Adelgid (HWA)

(Adelges tsugae Annand)

2013-2014 Winter Mortality Study:

- Cooperate with NJ Dept. of Agriculture
- Feb/March 2014 – observed sisten morality
- June 2014 – observed progredien mortality

Results submitted to Virginia Tech

- 5 trees; 10 branches from each tree
maximum of 20 HWA per branch counted
- 5 sites – Stokes SF Stony Lake, Stokes SF Lake
Oquittunk, Flatbrook WMA, DEWA Peter's Canoe
Camp Access Rd, DEWA Van Campens Glen
- 91-98% sisten mortality
- Write a Hemlock Resource Recovery Plan

Southern Pine Beetle

(Dendroctonus frontalis)

Host: Pines

Found: Southern NJ

Origin: Southern US

Southern Pine Beetle

(Dendroctonus frontalis)

- Poses a significant threat to ecological habitat, aesthetic value and recreational opportunities
- SPB continues to damage globally rare plant communities in the Pinelands
- Increases wildfire risk by intensifying fuel loads and restricting access

Southern Pine Beetle

(Dendroctonus frontalis)

- Monitoring:
 - SPB traps (18) are placed in six -(6) southern NJ counties
 - 6 weeks in April/May
 - count SPB and Clerids
- Aerial Survey – weekly during the summer
- Ground crews identify suppression sites

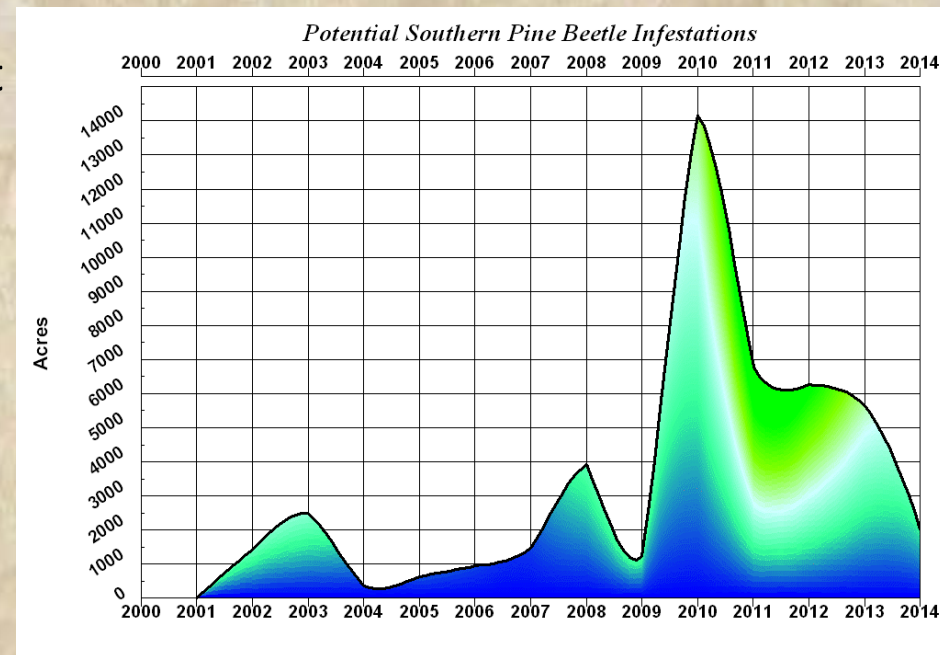

Southern Pine Beetle

(*Dendroctonus frontalis*)

SPB Program:

- Establish an SPB science advisory panel
- Cooperate with Natural Lands, Forest Fire, Division of Parks and Forestry, Division of Fish and Wildlife, USDA Forest Service
- Suppress SPB hot spots
- Monitor SPB spot growth
- Develop a cost share program to assist private landowners
- Implement preventative forestry measures such as thinning and prescribed burns

Southern Pine Beetle

(*Dendroctonus frontalis*)

Cut-and-Leave Suppression

Cut-and-Salvage Suppression

- Disorients beetles and disrupts population growth
- Found successful in prior suppression efforts across the US and Central America

- Decreases fire hazard
- Disrupts all life stages
- Preferred method

Southern Pine Beetle

(*Dendroctonus frontalis*)

2002-2007 SPB Growth

2009 SPB Growth

2010 SPB Growth

2015 SPB Growth

- The polar vortex slowed the movement of SPB, but did not stop it
 - The polar vortex caused greater SPB mortality inland but exhibited significantly reduced effects on coastal areas
- SPB was discovered in New York on Long Island in late September 2014

Gypsy Moth (*Lymantria dispar*)

Host: 100's of species –
Oaks, aspen
Found: Statewide
Origin: Europe and Asia

Gypsy Moth (*Lymantria dispar*)

- 1,330 acres defoliated in 2014
- No suppression program for 2015 on state lands
- NJ Department of Agriculture proposed approximately 500 acres for suppression
 - Aerial application of BtK
- Bio-Control: Virus, fungus, parasitic wasp and fly

Gypsy Moth (*Lymantria dispar*)

- Gypsy moth egg mass survey conducted in Sept/October
- High-use areas
- >500 egg masses per acre threshold to propose suppression action (>5 acre area)
- Submit proposal through internal review
- NJDA offers a voluntary program for municipalities and counties

**New Jersey
Gypsy Moth Egg Mass Survey**

LURKING AROUND THE CORNER...

Thousand Cankers Disease

Pityophthorus juglandis (walnut twig beetle)
Geosmithia morbida (fungus)

Host: Walnut

Closest Find: PA-Bucks (2011),
Chester (2014), and Lancaster
(2014) County

MD – Cecil County (2014)

Origin: Western US

Monitor and Trapping

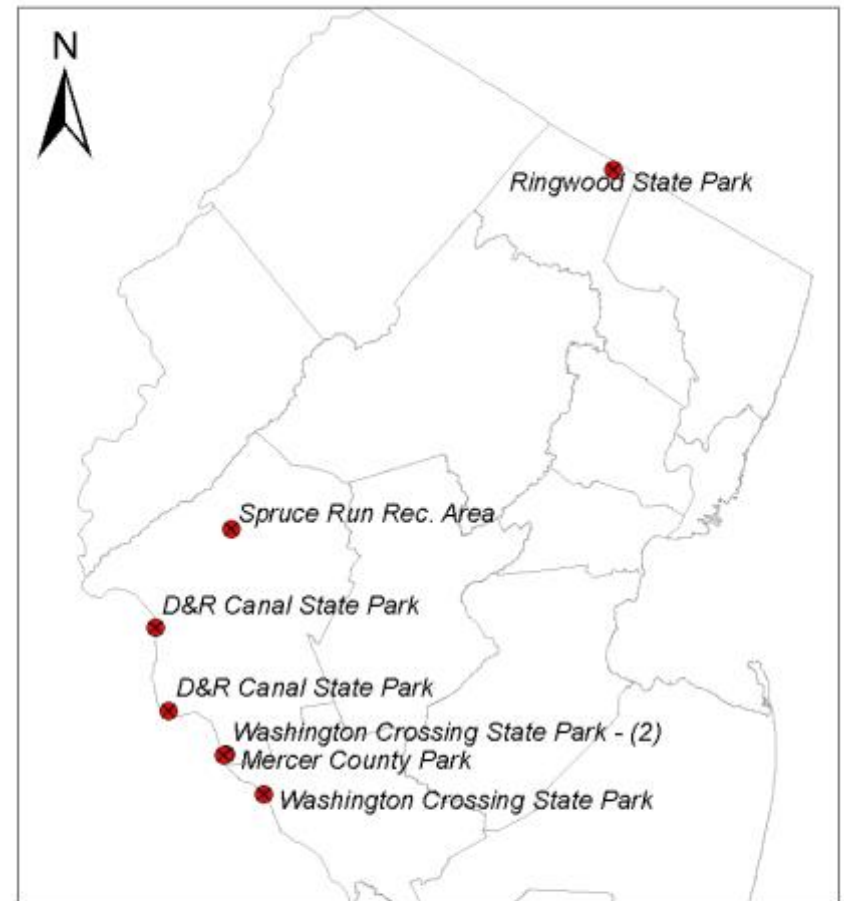

Thousand Cankers Disease

Pityophthorous juglandis (walnut twig beetle)
Geosmithia morbida (fungus)

- 8 traps in NJ (NJDA) – 2 in Mercer County, 5 in Hunterdon County, and 1 in Passaic County
- Concentrated traps along the Delaware River
- Deploy in April, Take down in June. Check every 2 weeks
- No WTB found

Spotted lanternfly (*Lycorma delicatula*)

Host: over 70 species – grape, stonefruit, apple, ailanthus, pines

Closest Find: PA - Berks County (2014)

Origin: Asia

Monitor and possible trapping

Sirex woodwasp (*Sirex noctilio*)

Host: Pine

Closest Find: Established in Northern PA and Western NY

Origin: Eurasia

Monitor/Visual surveys

Asian Longhorned Beetle

(*Anoplophora glabripennis*)

Host: Maple, Willow, Ash, Poplar,
Sycamore, Birch

Closest Find: NY – LI, Brooklyn,
Queens

(Eradicated from NJ in 2013)

Origin: Asia

Monitor/Visual surveys

Winter moth

(*Operophtera brumata*)

Host: Oaks, maples, Birch, Apple, Blueberry
Closest Find: NY – SI, LI, Rockland County
Origin: Europe
Monitor/Visual surveys

Winter moth look-alikes

Bruce spanworm

Fall Cankerworm

Winter Moth

- Adult moths are all active around the same time November – January/February
- Bruce spanworm and winter moth can hybridize

Asian gypsy moth (*Lymantria dispar asiatica*)

Host: over 600 species – oak, willow, larch, poplar, alder, evergreens

Closest Find: Washington State and Oklahoma

Origin: Asia

Monitor and Trapping

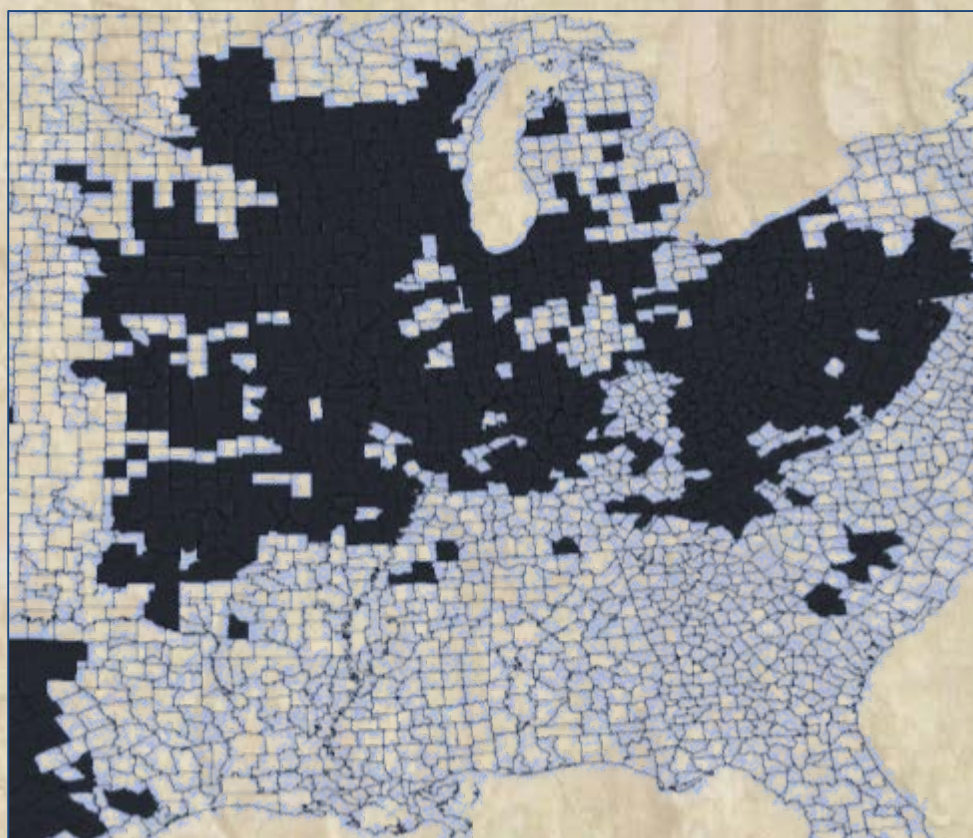

Oak wilt (*Ceratocystis fagacearum*)

Host: Oak

Closest Find: Western PA

Origin: Unknown

Monitor/Visual surveys

Oak wilt (*Ceratocystis fagacearum*)
