- Questions

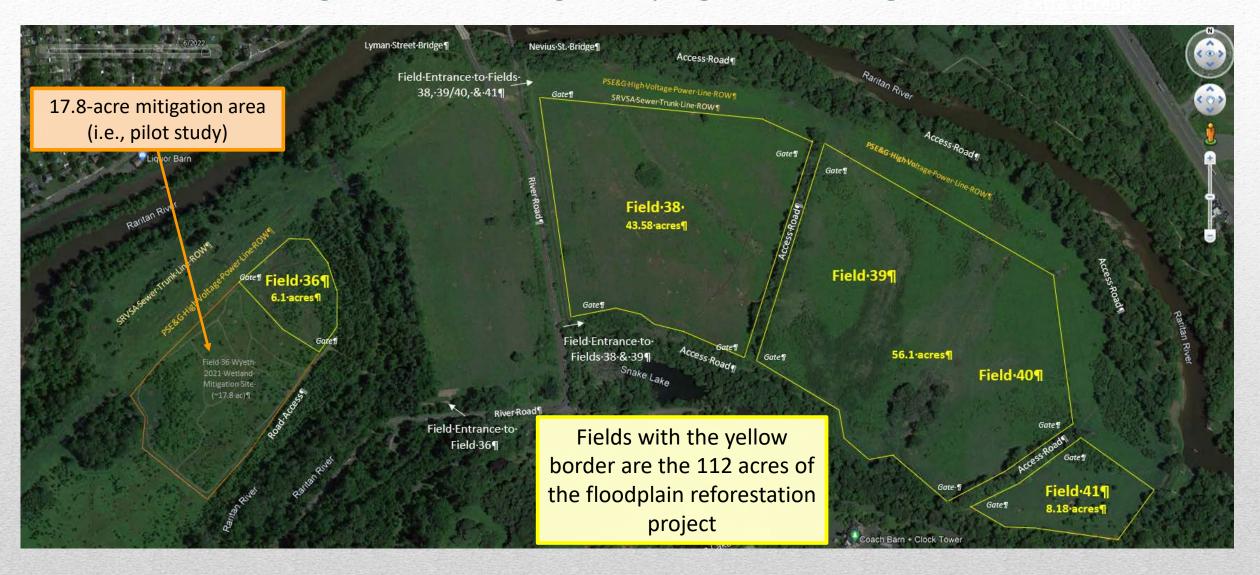

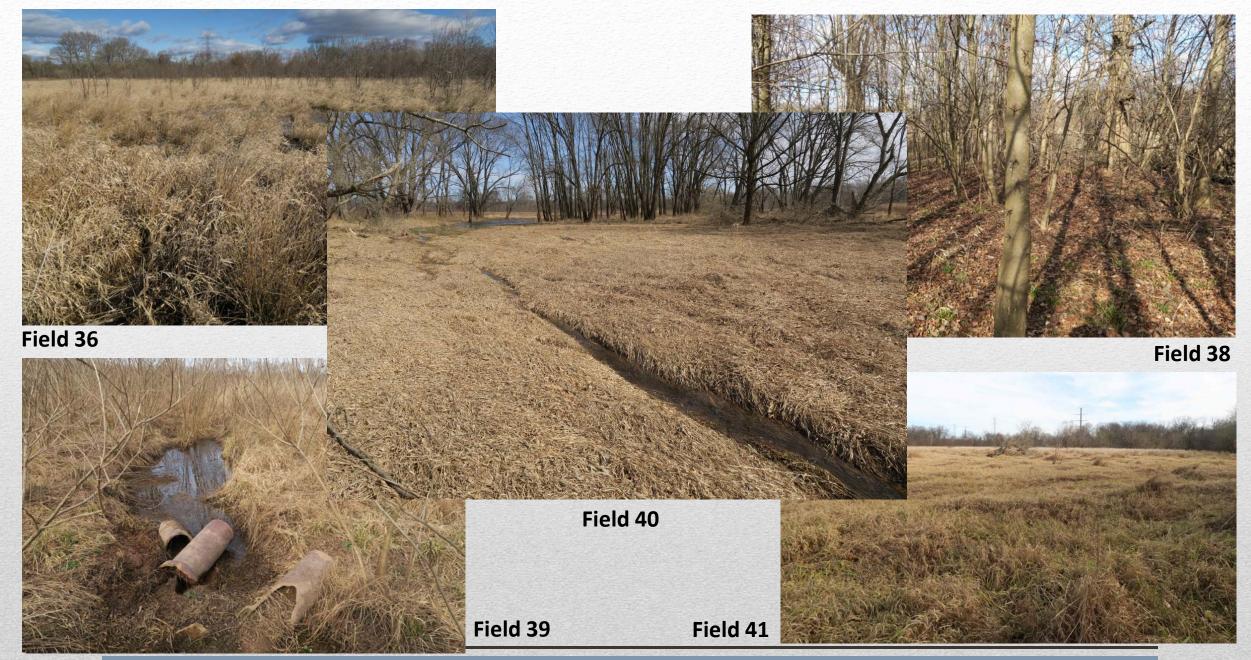

Determining what is feasible for the proposed ecological uplift is an essential parameter in selecting a site for restoration. The most effective enhancement activities are the removal of invasive species and the planting of native plants, which results in:

- increasing plant biodiversity
- connecting wildlife corridors
- creating and diversifying wildlife habitat,
- decelerating and absorbing floodwaters and magnifying the retention of floodwater sediment onto the floodplain
- removing excess nutrients from river water

WET/Highway Method Shared Function/Value	Starting Baseline	Compensatory Uplift
Groundwater Recharge	LOW Secondary Function	MODERATE Secondary Function
Groundwater Discharge	LOW Secondary Function	MODERATE Secondary Function
Flood Flow Alteration	LOW Secondary Function	HIGH Secondary Function
Fish & Shellfish Habitat	NA	NA
Sediment/Toxicant Retention	MODERATE Secondary Function	<b>HIGH</b> Secondary Function
Nutrient Removal	MODERATE Secondary Function	HIGH Secondary Function
Production Export	LOW Secondary Function	HIGH Secondary Function
Sediment/Shoreline Stabilization	LOW/MODERATE Secondary Function	HIGH Secondary Function
Recreation	MODERATE Primary Function	<b>HIGH</b> Primary Function
Wildlife Habitat	LOW Primary Function	MODERATE Primary Function

## After 3 Years of Negotiation with Regulatory Agencies, We Agreed on 112 Acres

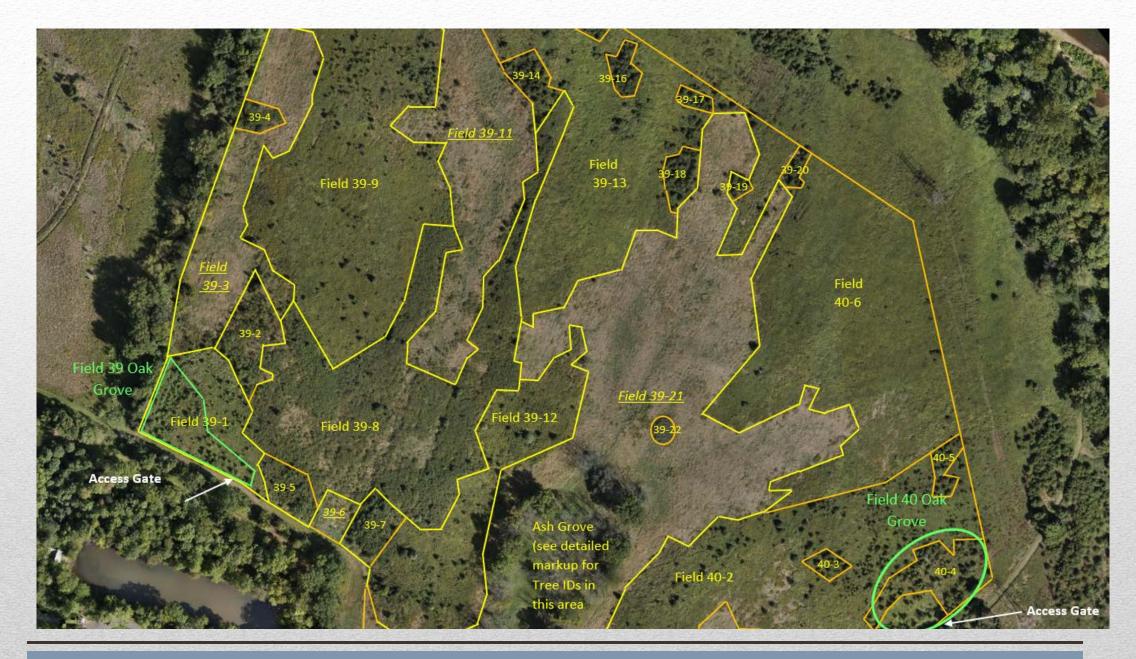

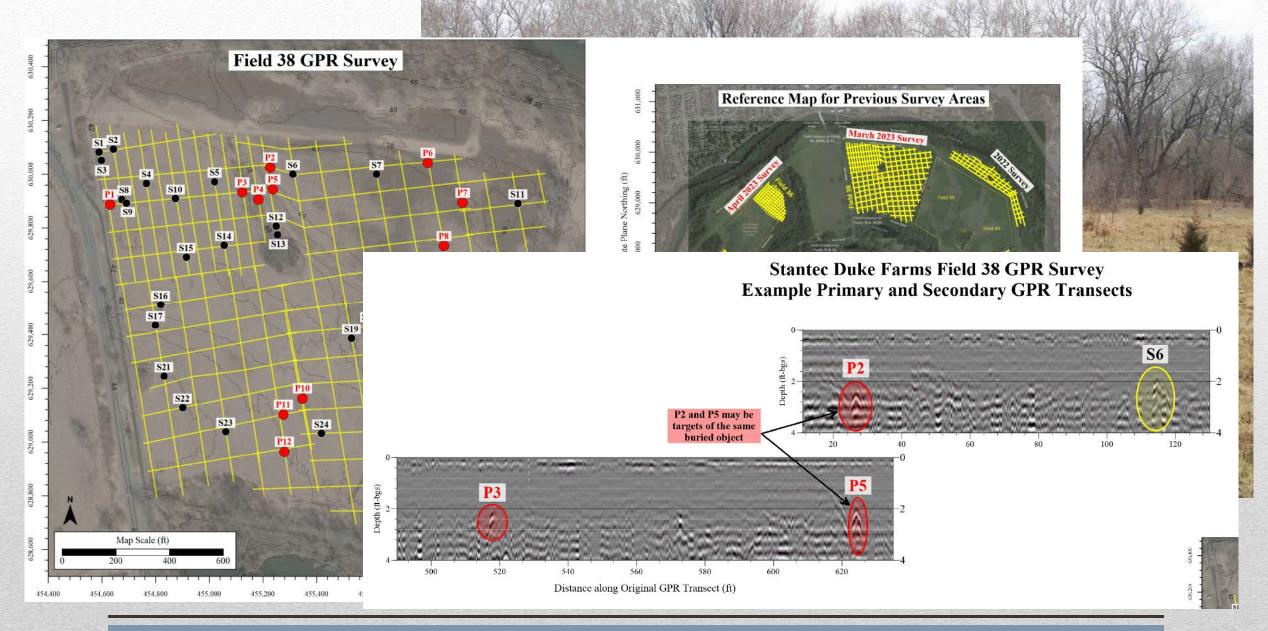

**Phase 1a: Field Assessment** 

# A Science-Based Approach

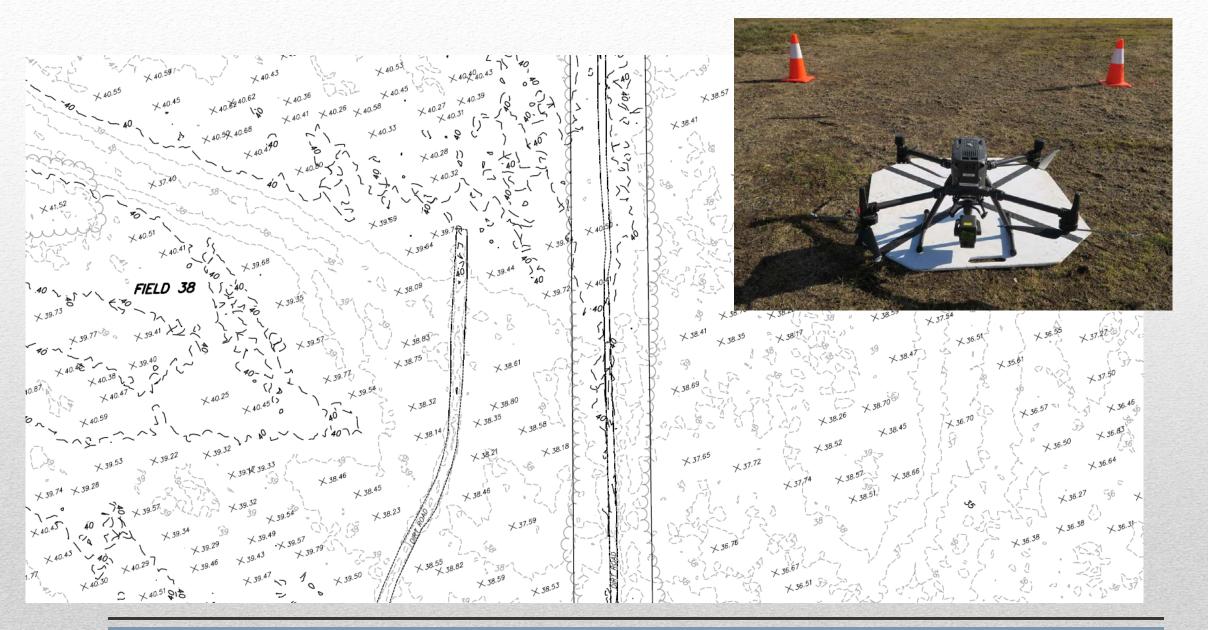

- Vegetation Coverage and Topographic Surveys via Drone
- Ground Penetrating Radar (GPR) Survey for Drainage Tiles
- Well Point Piezometer Installation & Continuous Water Level Gauging
- Soil Sampling and Lithology Description
- Soil Vertical Permeability Testing

Phase 1a: Field Subdivisions to Scope Invasive Species Treatments

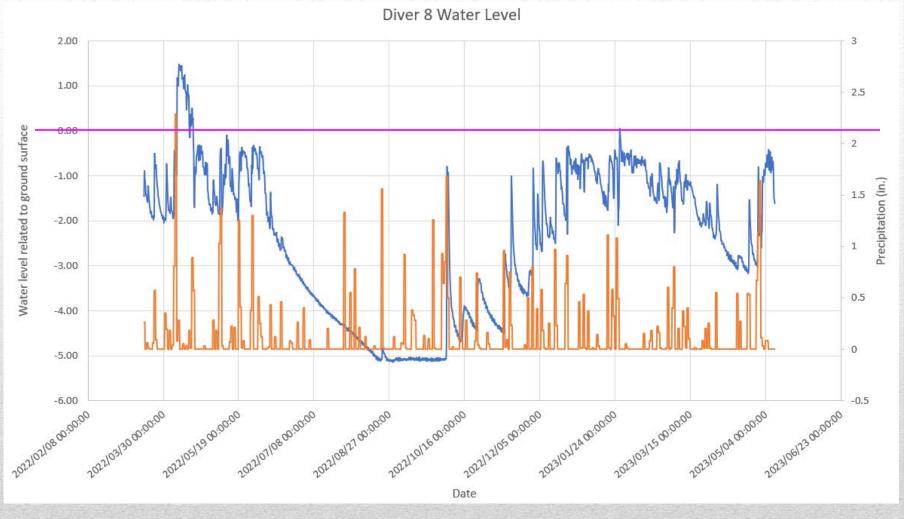

Phase 1a: GPR Survey to Locate Possible Intact Drainage Tiles and Pipes

Phase 1a: Drone Survey Microtopography Mapping

A. saccharinum, L. (A. dasycarpum, Ehrh.) Silver Maple.

Sussex: Waterloo and along the Delaware River—Britton, Warren: Very abundant from above the Water Gap to Riegels-ville—Porter. Hunterdon: Common along the Delaware—Best.

A. rubrum, L. Red Maple. Swamp Maple.

Swamps and low grounds. Common throughout the State.

#### QUERCUS, L. Oak.

Q. alba, L. White Oak.

Woods. Common throughout the State. Not abundant in the pine barrens. A form with peculiarly lengthened leaves at Bridgeton—J. B. Potter.\*

- Q. minor (Marsh.), Sargent. (Q. obtusiloba, Michx.) Post Oak.

  In sandy or rocky woods. Bergen:—Austin. Hudson: On
  Little Snake Hill—Britton. Warren: A clump on the Musconetcong near Bloomsbury—Porter; and common in the middle and southern counties.
- Q. bicolor, Willd. Swamp White Oak.

  In low grounds. Burlington: Marlton—H. A. Green; and common in the middle and northern counties.

Q. Phellos, L. Willow Oak. Pin Oak.

Mercer: — Willis. Monmouth: Keyport—Lockwood; near
Long Branch—Leggett. Middlesex: South River—Prof. Cook;

New Brunswick—Miss Cook; and common southward.

Var. pumila, Pursh.

Salem:—Commons. Ocean:—Wm. Bower.\*

CATALOGUE OF PLANTS.

221

B. nigra, L. River Birch. Red Birch.

Along rivers and lakes. Common throughout the State. Especially abundant along the Delaware and all its tributary streams.

### **Duke Farms Land Stewardship Plan**

May 2017

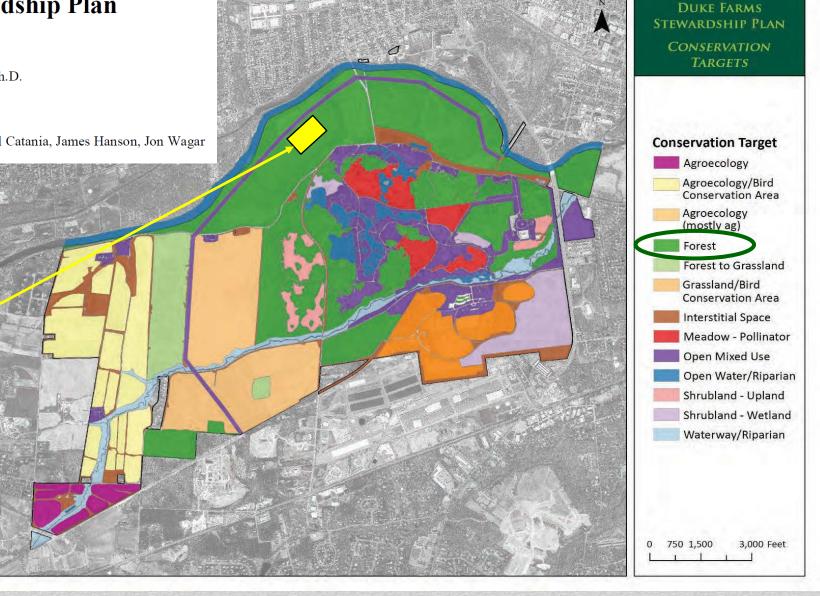

Prepared by Michael Van Clef, Ph.D. Ecological Solutions, LLC

8

Duke Farms Staff

Thomas Almendinger, Charles Barreca, Michael Bellaus, Michael Catania, James Hanson, Jon Wagar

In 2021, a 17.8-acre mitigation plot was planted, which was evaluated to help determine which native plants remain acclimatized to this environmental setting

<b>Project</b> 8	Scope	and (	<b>Ohi</b>	ectives
I Tojece,	ocope	alla (		CCCIVCS

112 Acres (109 acres of planting; 3 acres of vernal habitat)	Trees will be planted on 10-ft centers and will compose 80% of the planting. Shrubs will be planted on 8-ft centers in dedicated plots and will compose 20% of the planting; all plants will be weed matted and staked
Native Species Planting Plan and Invasive Species Treatment Plan	There are 18 prescribed native tree and 22 prescribed native shrub species designated in the Planting Plan and a vigorous Invasive Species Treatment Plan. Site was enclosed by 16,700 linear feet of deer exclusion fencing
Tree and shrub plant container sizes (3-gallon to 5-gallon containers)	<b>5 percent</b> of the planted trees will be a larger caliper size ( <b>0.75-inch</b> caliper or 7-gallon container); ~475 large caliper trees (primarily pin oaks) found and retained in the fields can be counted toward this percentage

<b>Project Scope and Objectives</b>	<b>Project</b>	Scope	and C	<b>Obj</b>	ectives
-------------------------------------	----------------	-------	-------	------------	---------

Monitoring Program	Sixty (60) vegetation monitoring plots (1.4% of total acreage), randomly placed within fields, with the number of plots within each field weighted by acreage, and the split between tree and shrub plots weighted by percent composition (approximately 80% and 20%, respectively) of each class. Thirty (30) of these plots will be permanent and will have the same location every year, while thirty (30) will be randomized every year to ensure full representation of the planting area
Monitoring Metrics	<ul> <li>(1) Tree/shrub survivability;</li> <li>(2) Stem density;</li> <li>(3) Tree height.</li> <li>(4) Invasive species percent cover;</li> <li>(5) Native vegetation percent cover; and</li> </ul>
Stipulated Performance Criteria for every aspect of the project	85% plant survival, 85% beneficial cover with less than 10% invasive species; trees must be an average of 8 feet or higher; vernal pool must contain water for certain periods and be dry during other periods.

Project Scope and Objectives			
Interim Monitoring Reports	An Annual Monitoring and Maintenance Report due by January 31st of the next calendar year shall (1) summarize monitoring efforts; (2) summarize and provide full detail of monitoring data; (3) evaluate compliance with performance metrics; (4) propose contingency measures (if needed); (5) detail maintenance activities that were performed at the site; and (6) describe any other findings pertinent to the Trustees' understanding of the implementation of the work		
Final Monitoring Report	The <i>Final Monitoring Report</i> will summarize all monitoring and maintenance activities, describe compliance with performance criteria, and identify what penalties from the Long-term Stewardship Payment Schedule should be assessed		

Site will be maintained and monitored for 5 years per NJDEP permit requirements

A **Project Completion Certificate** will be issued following Year 5 if all conditions are met upon submittal of a *Final Monitoring Report* 

There are additional obligations and activities that take place in Years 6 though 15 (e.g., maintaining the fence)

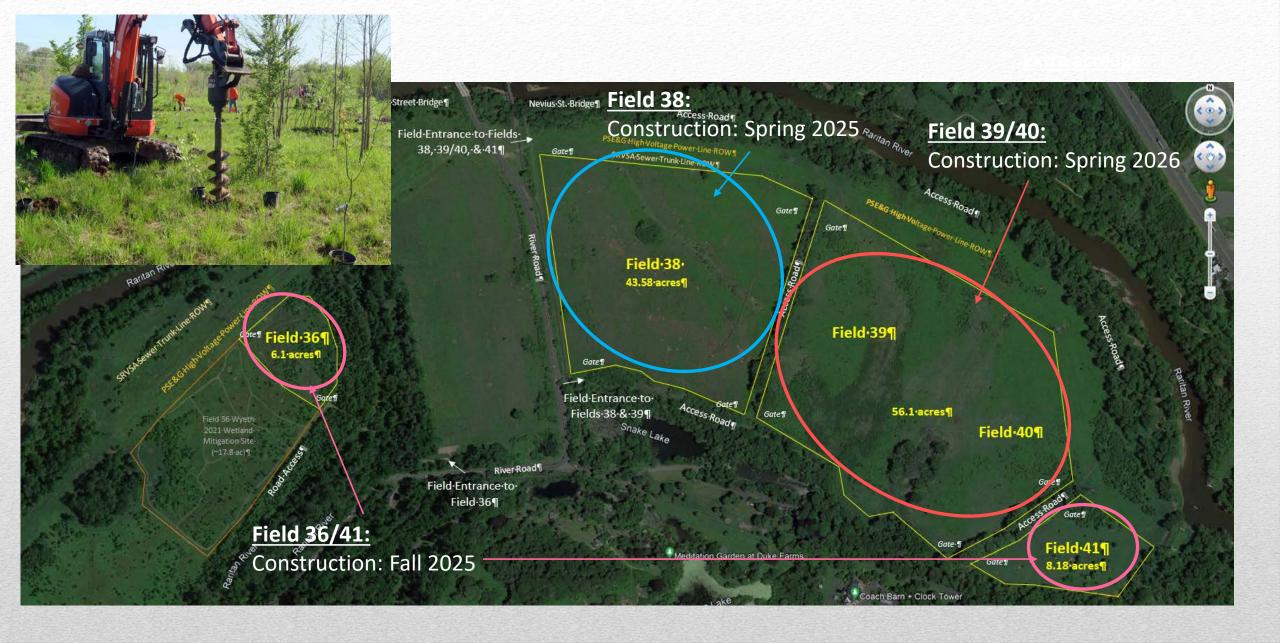

Phase 2b: Forested Floodplain Design Drawing - Field 38

**UPLAND TREE ZONE** 

LOWLAND TREE ZONE

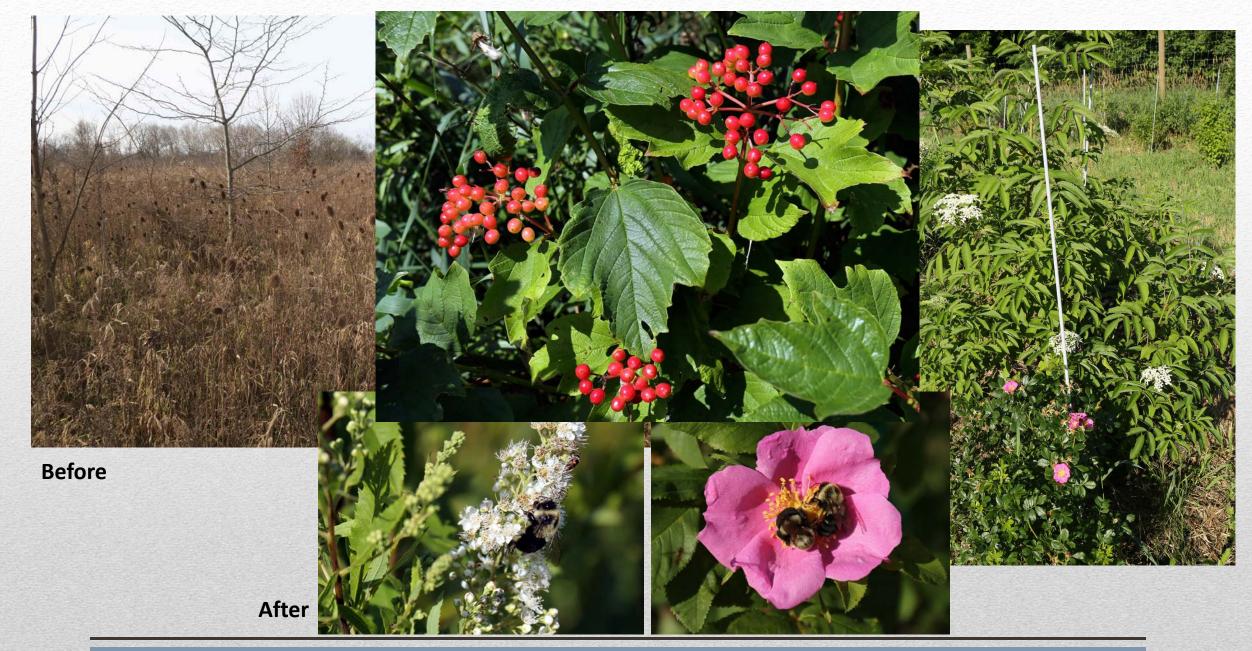

UPLAND SHRUB ZONE

LOWLAND SHRUB ZONE

Phase 2: Projected Outcomes – Vernal Habitat

Phase 2: Projected Outcomes - Shrub Habitat

Phase 2: Projected Outcomes - Forested Floodplain Habitat

- Content development of proposed interpretative signs along a newly-constructed trail along the Raritan River
- Assumption of perimeter fence maintenance in Years 6-15
- Allowing regulatory agency access to the site for the Year 1-15+ monitoring period
- Control of Callery pear and other invasives in Lowlands hedgerows and along River Road
